

AMENDMENTS TO THE CLAIMS:

The listing of claims replaces all prior versions and listings of claims in the application.

Claims 1, 6, 7, 11, 14 15, 16, 18, 20, 21, and 22 have been amended.

Claims 2-5 and 8-10 have been canceled.

New claims 23-29 have been added.

LISTING OF THE CLAIMS

1. (Currently Amended) A demarcation enclosure housing for ~~housing electronics on a an associated~~ structure comprising:

an enclosure frame having access to an interior side of the associated said structure and access to an exterior side of the associated said structure wherein said frame extends through an exterior wall of the associated structure;

said frame, on an exterior side, includes a door connected with an exterior side of said enclosure frame therefo and,

said frame includes a vent defined by said enclosure frame, said vent having an air intake port and an air exhaust port, said air intake port including and air intake pipe and said air exhaust port including an air exhaust pipe wherein adapted to allow ambient air flows in through said air intake pipe from said interior side of the said structure, to flow through said housing and flows out through said air exhaust port to said interior side of the structure.

2.-5. (Canceled)

6. (Currently Amended) The demarcation housing of claim 1, wherein said enclosure frame is substantially within a wall of the said structure.

7. (Currently Amended) The demarcation housing of claim [[3]] 1, wherein said air intake pipe extends from an area below said frame up to said frame and

said air exhaust pipe extends from said frame to an area above said frame wherein the ambient air flows via a chimney effect.

8.-10. (Canceled)

11. (Currently Amended) A demarcation enclosure housing for housing electronics and providing an interface between a service provider and a customer comprising:

an enclosure frame located in an exterior wall of an associated structure, the said enclosure frame having access to [[an]] interior side of a structure and access to an exterior sides of the associated said structure on opposite sides of the exterior wall;

said frame extending through the exterior wall of the associated structure and having an interior in fluid communication with said interior side of the said structure; and,

said frame, on an exterior side, includes including a door connected thereto for access to said interior from said exterior side of the said structure.

12. The demarcation housing of claim 11, wherein said frame includes a vent adapted to allow ambient air from said interior side of the said structure to flow through said housing.

13. The demarcation housing of claim 11, wherein said door includes hinge slots and said frame includes hinge pins symmetrically positioned on a first side and a second side of said frame, wherein said door is selectively pivotable about said first or said second side of said frame.

14. (Currently Amended) The demarcation housing of claim 12, wherein said vent includes an opening proximate to an upper end of said frame and an opening proximate to a lower end of said frame wherein the ambient air flows via a chimney effect.

15. (Currently Amended) A demarcation enclosure housing for housing electronics and providing an interface between a service provider and a customer comprising:

an enclosure frame extending through an exterior wall of an associated structure and having access to an interior side of a the associated structure and access to an exterior side of the associated said structure;

said frame includes a partition member for separating a provider access area from a customer access area; and,

said provider access area and said customer access area in fluid communication with said interior side of the associated said structure.

16. (Currently Amended) The demarcation housing of claim 15, wherein said frame includes an exterior door connected thereto, said door is selectively pivotable about said first or said second side of said frame.

17. (Original) The demarcation housing of claim 15, wherein said frame includes a vent adapted to allow ambient air to flow through said housing.

18. (Currently Amended) The demarcation housing of claim 15, wherein said frame includes an interior wall and an exterior wall forming a channel therebetween, said channel includes insulation therein awning extending outwardly proximate to an upper end.

19. (Original) The demarcation housing of claim 17, wherein said vent includes an air intake port and an air exhaust port.

20. (Currently Amended) The demarcation housing of claim 19, wherein said air intake port includes an air intake pipe[[,]] extending from an area below said frame up to said frame.

21. (Currently Amended) The demarcation housing of claim 20, wherein said air exhaust port includes an air exhaust pipe[[,]] extending from said frame to an area above said frame.

22. (Currently Amended) The demarcation housing of claim 21, wherein a terminal end of said air intake pipe and a terminal end of said air exhaust pipe are in fluid communication with said interior side of the associated ~~said~~ structure.

23. (New) A demarcation enclosure housing comprising:
an enclosure frame extending through an exterior wall of an associated structure and having access to interior and exterior sides of the associated structure;
said frame includes a partition member for separating a provider access area from a customer access area;
said frame further includes a vent having an air intake pipe and an air exhaust pipe adapted to allow ambient air to flow through said housing; and,
said air intake pipe and said air exhaust pipe further adapted for housing wires extending to and from said enclosure frame.

24. (New) The demarcation housing of claim 23, wherein the ambient air flows through said vent via a chimney effect.

25. (New) The demarcation housing of claim 23, wherein said frame includes an electrical box attached thereto.

26. (New) The demarcation housing of claim 23, wherein a terminal end of said air intake pipe and a terminal end of said air exhaust pipe are in fluid communication with said interior side of the associated structure.

27. (New) The demarcation housing of claim 1, wherein said frame, on an interior side, including another door connected thereto.

28. (New) The demarcation housing of claim 11, wherein said frame, on an interior side, including another door connected thereto for access to said exterior from said interior side of the associated structure.

29. (New) The demarcation housing of claim 14, said vent further includes an exhaust pipe wherein the ambient air flows from said housing to an interior side of the structure.
